KP scharfkant – cold-rolled sharp-edged profiles made of steel - angle profiles and Z-profiles

Shapes and dimensional ranges

Cold-rolled, sharp-edged profiles „KP sharp-edged are manufactured in five basic shapes according to EN 10162: as isosceles as well as non-isosceles U-profiles, angle profiles and as Z-profiles. The profiles are supplied in standard lengths of 6 m, the dimensional range of the profile legs is from 12 to 140 mm and the standard dimensions are available in wall thicknesses from 1.5 to 6 mm.

Surface finish

The surface quality of the profiles is mainly determined by the nature of the starting material.

In addition, scars, grooves or pressure marks may result from profiling or straightening of the profiles. When using chemically descaled starting material, pickling spots are possible to a small extent.

Materials

The starting material for KP PROFILE is unpickled hot-rolled strip and, as a finished product, it corresponds to grade E 235. On request, various dimensions are also available in stainless steel grade 1.4301 and, under the brand name SEQUOIASTEEL, in Cor-Ten steel. Other materials, special surface properties and delivery conditions are to be agreed separately.
